

Village of Cherry Creek – Box Culvert Replacement

Location: Cherry Creek, NY
Budget: \$ 225,000
Completion: 2011

The existing culverts on Southside Avenue and Union Street were in need of replacement. The concrete decks were deteriorating and their integrity was beginning to come into question. This firm designed a culvert replacement solution, prepared the construction documents for the project, and provided management services during the construction phase. This firm was also involved in the coordination with the USACE and the NYSDEC in obtaining the necessary environmental permits for the project.
